

## Trigger Template

The overall piece is 2.75" x 2.5" tall. But you can either use a coping saw, bandsaw, or carefully use a handsaw to cut out the rough dimensions.

Alternatively, you can print this out on 8.5"x11" paper, and cut it out. Then trace it onto a 1/4" thick board, and cut it that way.

I made this sketch by tracing an actual trigger from one of the guns I made.

All dimensions shown are approximate. You may need to slightly modify them based on your other assembly.
